Preface xiii

Committees and Sponsors xiv

Contents xv

Plenary Lectures

Bock, R.K.
Bringing together high energy physicist and computer scientist. A summary of the Oxford conference on Computing in High Energy Physics 1

Williams, D.O.
Computing on the eve of LEP data-taking: are we ready? 8

Hertzberger, L.O.
Does HEP still hold challenges for computer science? 15

Mazza, C.
Software project management 23

Gather, K.S.
SASD-tools for program design 29

Mackenzie, P.B.
Machines for lattice gauge theory 37

Nash, T.
Event parallelism: distributed memory parallel computing for high energy physics experiments 47

Kennedy, A.D.
Status of lattice gauge theory calculations 57

Martin, W.R.
Successful vectorization – reactor physics Monte Carlo code 68

Metcalf, M.
Recent progress in Fortran standardization 78

McColl, W.F.
Parallel algorithms and architectures 84

Otto, S.W.
Shared-memory versus distributed-memory: halftime score 95

Booth, S.P., K.C. Bowler, D.J. Candlin, R.D. Kenway, B.J. Pendleton, A.M. Thornton, D.J. Wallace, J. Blair-Fish and D. Roweth
Large scale applications of transputers in HEP: the Edinburgh Concurrent Supercomputer Project 101

Sufrin, B.
Formal methods in system design and implementation 108

Levine, R.H.
You want me to predict the future? 118

Krischer, W.
Commercial highly parallel signal processors on-line? 121

Gamble, J.N.
Beyond Ethernet – future LAN's 129

Wiegandt, D.
UNIX and HEP 134

Mount, R.P.
Overview of the essential tools 140

Blobel, V.
From DST to publication 148

Putzer, A.
Data structures and data-base systems used in high energy physics: modelling and implementation 156

Read, B.J.
Data structures and organisation: special problems in scientific applications 164

Fisher, S.M. and P. Palazzi
Using a data model from software design to data analysis: what have we learned 169

Myers, D.R.
HEP graphics: standard and portability versus performance and cost 176

Fluckiger, F.
Overview of HEP wide area networking: producer perspective 183

Hutton, J.
Future scientific networking 188

Kunz, P.F.
Software management issues 191

Watase, Y.
High energy physics computing in Japan 198

Hoare, C.A.R.
Formal methods in computer system design 206

Parallel Lectures

Hall, D.E., W.H. Greiman, W.F. Johnston, A.X. Merola, S.C. Loken and D.W. Robertson
The software bus: a vision for scientific software development 211

Story, C.M.
Software engineering in industry 217

Kowalski, H., T. Poser, L. Stanco and E. Tscheslog
Investigation of ADAMO performance in the ZEUS calorimeter reconstruction program 222

Skotniczny, Z.
Query by Forms: user-oriented relational database retrieving system and its application in analysis of experiment data 225

Lebrun, P. and A. Kreymer
High level language memory management on parallel architectures 231

Brun, M., R. Brun and A.A. Rademakers
CMZ – a source code management system 235

Mueller, K. and P. Pfeifer
CODEBASE: a commercially developed code management system and code transfer facility 239

Van Herwijnen, E.
The use of text interchange standards for submitting physics articles to journals 244

Youssef, S., W. Martin, T.C. Wan and S. Wilderman
A vectorized Monte Carlo detector simulation program for electromagnetic interactions 251

Georiopoulos, C.H. and M.E. Mermikides
Vectorized simulation of the response of a time projection chamber 255

Corden, M.J., C.H. Georiopoulos and M.E. Mermikides
Implementation of the ALEPH detector simulation code using UNIX with on-line graphics display 260

Chandra, U., G. Riccardi, J. Vagi, J.-L. Dekeyser and F. Hannedouche
Aftran: array Fortran programming language 263

Corden, M.J., C.H. Georgiopoulos, R. Brun, F. Bruyant and J.-L. Dekeyser
Progress towards a vectorized version of the GEANT Monte Carlo program 268

Briggs, D., T. Glanzman, P. Grosse-Wiesmann, J. Tinsman, S. Holmgren and M.W. Schaad
A calorimeter software trigger for the Mark II detector at SLC 273

May, E.N.
Portable parallel programming in a Fortran environment 278

Avico, N., P. Bacilieri, S. Cabasino, N. Cabibbo, L.A. Fernández, G. Fiorentini, A. Lai, M.P. Lombardo, E. Marinari, F. Marzano, P. Paolucci, G. Parisi, J. Pech, F. Rapuano, E. Remiddi, R. Sarno, G. Salina, A. Tarancón, G.M. Todesco, M.Torelli, R. Tripiccione and W. Tross
From APE to APE-100: from 1 to 100 Gflops in lattice gauge theory simulations 285

NA-35 Collaboration, G. Vesztergombi
"Iconic" tracking algorithms for high energy physics using the TRAX-I massively parallel processor 290

Denby, B. and S.L. Linn
Status of HEP neural net research in the USA 297

Bizeau, C., A. Bogaerts, R.W. Dobinson, D.R.N. Jeffery, W. Lu, C. Parkman and Y. Perrin
The use and possible abuse of transputer links 301

Thaler, J.J.
Data-acquisition modeling and simulation 309

ZEUS CDAQ Collaboration, P. Erhard, J. Ficenec, K. Gather, G. Heath, M. Iacovacci, J. Kehres, R. Loveless, M. Mobayyen, D. Notz, R. Orr, A. Sephton, R. Stroili, K. Tokushuku, W. Vogel, J. Whitmore and L. Wiggers
ZEUS hardware control system 313

ZEUS Collaboration, L.W. Wiggers and J.C. Vermeulen
The use of transputers in the ZEUS online system 316

ZEUS CDAQ Collaboration, S. Bhadra, M. Crombie, D. Kirkby and R.S. Orr
The ZEUS third-level trigger system 321

Quarrie, D.R., M.D. Anderson, C.T. Day, G. Goeransson, J. Patrick, M. Schmitz, E. Sexton and B. Troemel
The CDF online system 325

Booth, A.W., J.T. Carroll, R. Forster, G. Goeransson, L. Gustafsson and N. Ho
A knowledge-based approach to network and module diagnosis 332

Cutts, D., J.S. Hoftun, C.R. Johnson and R.T. Zeller
Data acquisition at D0 339

Sendall, D.M., C. Boissat, W. Bozzoli, P. Burkimsher, R. Jones, J-P. Matheys, G. Mornacchi, T. Nguyen, P. Vande Vyvre, A. Vascotto and D. Weaver
MODEL: a software suite for data acquisition 343

White, V.
Distributed data-acquisition systems (PAN-DA) for Fermilab experiments 348

Saulys, A.C., A. Etkin, K.J. Foley, R.W. Hackenburg, R.S. Longacre, W.A. Love, T.W. Morris, E.D. Platner, S.J. Lindenbaum, C.S. Chan and M.A. Kramer
MPS data-acquisition software system 353

Barao, F., C. Gaspar, Ph. Gavillet, J.Ph. Laugier, B. Martin, P. Moreau, M. Pimenta, M. Reis and J. Varela
DELPHI's central partition 358

Werner, C.M.L., M. Pimenta, J. Varela and J. Souza
FADO 2.0: a high level tagging language 364

Cittolin, S., M. Demoulin, A. Fucci, W. Haynes, B. Martin, J.P. Porte and P. Sphicas
The third level trigger and output event unit of the UA1 data-acquisition system 370

Chen, H.-S.
Fast simulation of showers in inhomogeneous media 375

Stanco, L.
Particle track recontruction in heavy materials with the Kalman technique 380

Lessner, E.S.
Weighted fit of parametric functions to distributions. The new interface of HBOOK with MINUIT 385

Billoir, P.
Progressive track recognition with a Kalman-like fitting procedure 390

Dittus, F.
Parallel processing with attached processors in a computer center environment 395

Delfino, M., E. Fernández, S. Orteu and A. Pacheco
The ALEPH event reconstruction faciltity: parallel processing using workstations 401

Sliwa, K.
CDF's experience with a parallel architecture multiprocessor system – ACP 407

O'Neale, S.W.
The OPAL event server 413

Nichols, J.
The Fermilab central computing facility architectural model 417

Avery, P. and A. White
UFMULTI: a new parallel processing software system for HEP 422

Rushton, A.M., L. Hunt, T. McGlynn, F. Ochsenbein, B. Perrine, A. Richmond, F. Romelfanger, G. Russo, P.M.B. Shames, J. Travisano, L. Willard and S. Zeller
Design and implementation of an optical disk-based astronomical data archive 427

Brun, R., O. Couet, C.E. Vandoni and P. Zanarini
PAW, a general-purpose portable software tool for data analysis and presentation 432

Johnstad, H.
PAW at Fermilab 438

Schilling, P.K.
Graphics at DESY 443

Bonissent, A. and F. Etienne
Artificial intelligence steering for the interactive analysis of a high energy physics experiment 447

Runge, K.
A high speed network for HEP in Germany 452

Karita, Y., F. Abe, H. Hirose, H. Goto, R. Ogasawara, F. Yuasa, Y. Banno and Y. Yasu
Networking for high energy physics in Japan 455

Bacilieri, P., B. Caccia, R. Cardarelli, G.P. Carlucci, O. Ciaffoni, M. Coli, G. Di Pirro, M.L. Ferrer, A. Ghiselli, A. Martini, G. Medici, G. Mirabelli, E. Pace, R. Santonico, L. Trasatti, E. Valente and S. Valentini
STARNET, a fiber optic metropolitan area network with centralized control 459

Adye, T., T. Berners-Lee, S. Brobecker, A. Camacho, D. Davids, F. Harris and P. Lorenz
Online communications in the DELPHI experiment 466

Posters

Wan Abdullah, W.A.T.
Connectionist architectures for triggering and track reconstruction 472

Berny, L. and H. Frese
Automatic generation of software detailed design documents for C language programs 476

Cutts, D., J.S. Hoftun, A. Sornborger, C.R. Johnson and R.T. Zeller
Neural networks for event filtering at D0 478

Dobberstein, M.P.
The calibration of the ZEUS forward drift chamber: an application for software with a high degree of parallelism 483

Booth, S.P., R.W. Dobinson, D.R.N. Jeffery, W. Lu, K.M. Storr and A. Thornton
An evaluation of the Meiko computing surface for HEP Fortran farming 486

Flieller, S.
T.Node, industrial version of SuperNode 492

Carter, J.M., M.G. Green and T. Medcalf
Transparent use of transputers for off-line computation 495

Hall, D.E., A. Agogino, W.H. Greiman, W.F. Johnston, D. Olson, R. Paasch, A. Padgaonkar and D.W. Robertson
A fault location system for a time of flight detector array 499

Hoek, J.
Use of attached transputer hardware to VAX's for offline analysis 503

Ilyin, V.A., A.P. Kryukov, A.Ya. Rodioniov and A.Yu. Taranov
High speed Dirac algebra calculations in a space of arbitrary dimension by means of a computer algebra system 505

Jejcic, A., J. Maillard, J. Silva, M. Auguin and F. Boeri
Could running experience on SPMD computers contribute to the architectural choices for future dedicated computers for high energy physics simulation? 507

Boissat, C., R. Jones and G. Mornacchi
The model human interface 512

Männer, R.
A programmable systolic array correlator as a trigger processor for electron pairs in RICH (ring image Cherenkov) counters 516

Hallam-Baker, P.M. and I.C. McArthur
Use of Occam in ZEUS 520

Da Rocha, A.R.C. and S. Palermo
Software quality assurance in HEP 524

Schaile, O.
DZDISP: a graphics tool to interact with ZEBRA data structures 528

Voevodin, V.P., V.N. Govorun, A.M. Davidenko, An.V. Ekimov, N.S. Ivanova, V.I. Kovaltsov, Yu.M. Kozyaev, A.F. Lukyantsev, M.Yu. Matveev, V.A. Senko, A.N. Sytin and G.V. Tishin
The 780/E 32-bit specialized processor-emulator 532

Whalley, M.R.
The Durham-RAL high energy physics databases – HEPDATA 536

White, B.
The comparison and selection of programming languages for high energy physics applications 538

Evening Talk and Abstracts

Treleaven, P. and M. Vellasco
Neural computing overview 543

Abstracts 560

List of participants 563

Author index to volume 57 568

Subject index to volume 57 577

KWIC index to volume 57 585
